**About this release**

This document contains important information about the current release. We strongly recommend that you read the entire document.

**Release build**

Name	Version
McAfee Agent	5.0.4.449
SYSCore	15.5.0.4030

**Package date** – January 17, 2017

**Supported McAfee Products**

For a list of supported McAfee products, see McAfee Knowledge Base article [KB87361](#).

---

**Resolved issues**

This Hotfix resolves the issues below. For a list of issues fixed in earlier releases, see the Release Notes for the specific release.

Reference	Issue Description
1175656	Input validation security issue with MA’s remote log interface. This Hotfix addresses this security issue <a href="#">SB10183</a> .
1173050	Maccompatsvc was crashing when two parallel threads were trying to access SQLite databases. This Hotfix addresses this crash issue.
1169582	Macmnsvc service was consuming large amounts of memory and making the system hang. Now macmnsvc does not consume as much memory.
1171154	An application using the McAfee Agent message bus gets stuck while attempting to stop using the bus. The message bus stop hangs up internally. This is due to sending an asynchronous request with a large timeout and having no response come back. With this Hotfix, message bus stops immediately.

1164189	On upgrading Mac OS from El Capitan to Sierra, the agent temp folder was getting deleted, causing DAT updates to fail. With this Hotfix the temp folder gets recreated if it is deleted during OS upgrade, and DAT update happens successfully.
1164138	On deploying point products with McAfee Agent, the next communication was taking thirty minutes. Now Agent-to-Server communication works without delay as expected.
1145877	The GUID field in the events forwarded by agent was NULL, due to a buffer overflow issue, so these events were rejected by event parser and hence they were not added to ePO database. This Hotfix resolves the buffer overflow issue.
1154813	On Mac OS clients, Agent-to-Server Communication (ASC) was failing due to corruption in McAfee Agent Database. McAfee Agent now removes the corruption and ASC happens successfully. User can see additional logging.
1151658	Clients were failing to update from SuperAgent repositories, as files were missing from it after successful repository replication. Files from Super-Agent repositories were purged when lazy caching and disk quota policies were disabled. Super-Agent content is no longer purged now with this Hotfix.
1147041	UNC repository order was not changing when it was configured to sort by ping time or subnet distance, so update was not happening from desired UNC Repository. This Hotfix addresses this problem.
1154419	When the user specifies a custom Agent Wake-up Communication Port or Agent Broadcast Communication Port in the ePO Settings, MA used the default port. MA now uses the specified ports immediately upon installation.
1151125	When McAfee ePolicy Orchestrator tried to close agent to server communication, McAfee agent does not respond and left an open connection on the server. This caused connection refusal for incoming Agent-to-Server communication requests and resulted in subsequent ASC failures. This Hotfix addresses this problem.

---

## Installation instructions

For information about installing or upgrading McAfee Agent, see *McAfee Agent 5.0.3 Product Guide: PD26439*.

This hotfix can be installed on any supported OS. See Knowledgebase article [KB51573](#) for information on supported operating systems.

**Important** We do not support the automatic upgrade of a pre-release software version. To upgrade to this software, you must first uninstall the existing version.

---

## Find product documentation

After a product is released, information about the product is entered into the McAfee online Knowledge Center.

### Task

- 1 Go to the **Knowledge Center** tab of the Intel Security ServicePortal at <http://support.mcafee.com>.
- 2 In the **Knowledge Base** pane, click a content source:

- **Product Documentation** to find user documentation
  - **Technical Articles** to find KnowledgeBase articles
- 3 Select **Do not clear my filters**.
  - 4 Enter a product, select a version, then click **Search** to display a list of documents.
