What's new

The current release of the product includes these enhancements and changes.

UAS support

USB-attached SCSI is now supported for Plug and Play devices. For information about enabling this feature refer to [KB91074](#).

Resolved issues

The current release of the product resolves these issues. For a list of issues fixed in earlier releases, see the Release Notes for the specific release.

McAfee DLP extension for McAfee ePO issues

Reference	Description
1249079	Email tag preservation can now be disabled with an option in Client Configuration Content Tracking .
1249384	Using brackets in a rule name no longer creates extra characters.
1253286	An upgrade in the device mode no longer enables unwanted handlers.

McAfee DLP Endpoint issues

Reference	Description
1232417	Web application content fingerprinting can now be applied when the URL contains a space (%20).
1239376	When installing or updating McAfee DLP Endpoint client, policies are loaded after the first restart. The root cause was a certificate trust issue.
1246588	McAfee DLP add-ins for Microsoft Office have stability improvements.
1250212	Web protection rules and web content fingerprinting now support URL paths containing a query string.
1252605	Send to OneNote is now blocked as an image printer, not as a local printer.
1253678	Location-based content fingerprints with only a document property condition now tag files. The root cause was that the text extractor didn't run if no content was specified, so the document properties were not extracted.
1255848	Printer protection rules now work correctly with network printers. The issue was due to the backslashes in the network printer name not being properly interpreted.
1255517	Installing McAfee DLP Endpoint client no longer causes Internet Explorer to stop working.

Installation information

For information about installing or upgrading McAfee DLP 11.0.700 (11.0 Update 7) software, see the [McAfee Data Loss Prevention 11.0.500 Installation Guide](#).

The recommended installation of the client software uses the McAfee ePO infrastructure for deployment to the endpoints.

You can also deploy McAfee DLP Endpoint client software to your network using third-party enterprise software deployment tools.
